

Allergen Update to Carlsberg Products

Your Legal Obligation

From 13th December 2014, it became a legal requirement for you to inform your customers of products that contain any of 14 allergens. It is now a criminal offence not to do so.

What must you do?

As an outlet serving food and/or drink you must ensure you can provide information to customers about allergens in all non pre-packed food and drinks sold at your outlet before they make a food or drink purchase.

You will see we have already taken care of the pre-packed products we supply to you. We have the allergens listed on all our packaged products and also our cask and keg labels.

To help you with non pre-packed drinks, we have previously made available a list of allergens contained in the draught Carlsberg products we supply to you. Please visit www.carlsbergwedelivermore.co.uk for more information.

What has changed?

From time to time the ingredients in our products may change and when that change affects the allergens in a product that we supply to you, we will make new allergen information available so that you can inform your customers. In addition, we have also collated allergen information on our wines so that you can now have allergy information on Carlsberg UK products in one table.

Our recipe for draught Somersby will be changing in May 2015 and as a result there is new allergy information for this product. Please see the allergen table below for details. You will need to bring this change in allergen information to the attention of your customers. Failure to do so could be a criminal offence.

Please note that the recipe for packaged Somersby has not changed. If your customers have an allergy that prevents them enjoying the new draught product, they may still enjoy the packaged Somersby.

How can you provide this information?

It is a legal requirement to let customers know that allergen information is available upon request and to tell them when allergen information changes. However, how you inform them is up to you. Examples include:

- labels, tickets or stickers;
- printed menus or lists so that customers don't need to ask;
- signs, blackboards or POS notifications; and/or
- verbal information from staff (although written verification of the verbal information must also be available).

We have updated our complete table of Carlsberg UK products we supply to you at www.carlsbergwedelivermore.co.uk. In addition to bringing the allergen change to your customer's attention we suggest printing off this table and putting it on your wall next to your bar.
